PROFESSIONAL SUMMARY

Computer Science graduate (Cybersecurity), Arizona State University, with hands-on experience in cloud security, security operations, Python automation, Salesforce API integrations, and incident response. Built AWS security monitoring and zero-trust data workflows, SIEM detection pipelines, and SOAR-style alert triage systems. Experienced with OAuth 2.0, IAM, REST APIs, Elasticsearch, MITRE ATT&CK, and NIST/CIS security principles.

CORE COMPETENCIES

Cloud Security | Detection Engineering | Security Operations (SOC) | Incident Response | SIEM/SOAR | IAM and Least Privilege | API Security | Vulnerability Management | Zero-Trust Architecture | Security Automation | DevSecOps | MITRE ATT&CK | Salesforce Integration Security | AI Security Research

WORK EXPERIENCE

CloudFountain Inc. **Jul 2026 – Present**
Cybersecurity and AI Engineer Intern *Belmont, MA*

- Configured and tested **Salesforce CRM integrations** using OAuth 2.0, REST APIs, and permission-scoped access to Account and Opportunity objects; verified authenticated data retrieval and record-management workflows in a development environment.
- Evaluated Salesforce **Opportunity stage controls**, validation requirements, and notification workflows; documented business rules and secure automation designs for controlled record updates and consistent data handling.
- Supported cloud-security and **identity and access management (IAM)** reviews, assessing authentication, least-privilege permissions, API exposure, and configuration risks; prepared risk findings and remediation recommendations using NIST/CIS principles.
- Researched **AI security and RAG** architectures, including prompt injection, data leakage controls, model evaluation metrics, and guardrails; developed technical documentation and integration recommendations.

Projacs International **May 2024 – Jul 2024**
Cybersecurity Analyst Intern *Doha, Qatar*

- Reduced API telemetry latency **85%** (2 seconds to 300 ms) by building Python/PostgreSQL ETL pipelines orchestrated with Apache Airflow to process **1 TB+ of daily security telemetry** for SIEM analysis.
- Architected an AWS S3 zero-trust data lake for **100+ users**, implementing IAM least-privilege access, KMS encryption, and CloudTrail audit logging to strengthen data protection and traceability.
- Improved threat detection **40% across 12 regions** by integrating CloudTrail with Elasticsearch anomaly detection; reduced alert triage time **35%** using Python-based log normalization and SIEM ingestion automation.

Human Resources Office – Arizona State University **Aug 2023 – Jan 2024**
Office Data Aide *Tempe, AZ*

- Cut manual data entry **75% across 350+ faculty profiles** with Python scripts and Excel macros for automated validation and quality checks.
- Improved database retrieval speed **4x** for **20+ daily requests** by maintaining SQL-based HR records supporting onboarding and payroll operations.
- Supported access governance through RBAC and least-privilege reviews; automated anomaly and duplicate-record detection, achieving **zero discrepancies** in quarterly compliance audits.

Keepet Containers **May 2023 – Aug 2023**
Cybersecurity and IT Intern *Gujarat, India*

- Reduced IDS false positives **26%** by deploying and tuning Suricata in Docker to monitor **50 GB+ of daily network traffic**.
- Identified **12 critical exploits** in authorized internal assessments using Metasploit and Burp Suite; mapped findings to MITRE ATT&CK for prioritized remediation.
- Achieved **99.2% incident traceability SLA adherence** through Elasticsearch correlation of firewall, DHCP, and application logs; produced CIS-aligned risk reports addressing an estimated **$25,000** in potential data loss.

PROJECTS

Eazy Route – Healthcare Scheduling and Route Optimization Platform

- Developed a full-stack clinician workflow application using **React Native, backend APIs, and AWS-backed prototype infrastructure**, supporting scheduling, route management, mileage tracking, secure messaging, notifications, visit status, and emergency alerts with attention to access control and data protection.

AutoTriage – SOAR Pipeline and Analyst Dashboard

- Built a **FastAPI and React** security triage system that ingests, enriches, deduplicates, correlates, scores, and routes alerts; added Prometheus metrics and Playwright end-to-end tests for repeatable incident-response demonstrations.

CloudSentinel – AWS Cloud Security Lab

- Developed a cloud security lab for CloudTrail-focused attack simulations, IAM least-privilege analysis, policy checks, and guided remediation, with Python validation and API testing in Docker.

ThreatOps – Incident Investigation Simulator

- Created **10 incident investigation casefiles** covering triage, containment, and reporting; mapped scenarios to MITRE ATT&CK and used Elasticsearch/Kibana queries to support detection analysis.

EDUCATION

Arizona State University **May 2026**
Bachelor of Science in Computer Science (Cybersecurity Concentration) Tempe, AZ
Minor: Mathematics | **Certificate:** Business Data Analytics

TECHNICAL SKILLS

Security: Elasticsearch, Kibana, IBM QRadar, Suricata IDS, Wireshark, Metasploit, Burp Suite, MITRE ATT&CK, SIEM, SOAR, Incident Response, Vulnerability Assessment, NIST/CIS Controls

Cloud and Identity: AWS (S3, IAM, KMS, CloudTrail), GCP, OAuth 2.0, RBAC, Least Privilege, Zero-Trust Architecture, API Authorization, Cloud Security Monitoring

Enterprise Integration: Salesforce CRM, REST APIs, Account and Opportunity Objects, CRUD Operations, OAuth Integration, Opportunity Stage Management, Workflow and Validation Design

Programming and Development: Python, Java, C/C++, JavaScript, SQL, React, React Native, FastAPI, PostgreSQL, MySQL, SQLite, Git

DevSecOps and Data: Docker, Apache Airflow, CI/CD, Secure SDLC, ETL, Prometheus, Playwright, Pandas, scikit-learn, RAG, AI Guardrails, Tableau, Power BI
